

Myths and Facts About Spaying and Neutering

MYTH: My pet will get fat and lazy.

FACT: The truth is that most pets get fat and lazy because their owners feed them too much and don't give them enough exercise.

MYTH: It's better to have one litter first.

FACT: Medical evidence indicates just the opposite. In fact, the evidence shows that females spayed before their first heat are typically healthier. Many veterinarians now sterilize dogs and cats as young as eight weeks of age. Check with your veterinarian about the appropriate time for these procedures.

MYTH: My children should experience the miracle of birth.

FACT: Even if children are able to see a pet give birth—which is unlikely, since it usually occurs at night and in seclusion—the lesson they will really learn is that animals can be created and discarded as it suits adults. Instead, it should be explained to children that the real miracle is life and that preventing the birth of some pets can save the lives of others.

MYTH: But my pet is a purebred.

FACT: So is at least one out of every four pets brought to animal shelters around the country. There are just too many dogs and cats—mixed breed and purebred.

MYTH: But my dog is so special, I want a puppy just like her.

FACT: A dog or cat may be a great pet, but that doesn't mean her offspring will be a carbon copy. Professional animal breeders who follow generations of bloodlines can't guarantee they will get just what they want out of a particular litter. A pet owner's chances are even slimmer. In fact, an entire litter of puppies might receive all of a pet's (and her mate's) worst characteristics.

MYTH: I don't want my male dog to feel like less of a male.

FACT: Pets don't have any concept of sexual identity or ego. Neutering will not change a pet's basic personality. He doesn't suffer any kind of emotional reaction or identity crisis when neutered.

MYTH: I want my dog to be protective.

FACT: Spaying or neutering does not affect a dog's natural instinct to protect home and family. A dog's personality is formed more by genetics and environment than by sex hormones.

MYTH: It's too expensive to have my pet spayed or neutered.

FACT: The cost of spaying or neutering depends on the sex, size, and age of the pet, your veterinarian's fees, and a number of other variables. But whatever the actual price, spay or neuter surgery is a one-time cost—a relatively small cost when compared to all the benefits. It's a bargain compared to the cost of having a litter and ensuring the health of the mother and litter; two months of pregnancy and another two months until the litter is weaned can add up to significant veterinary bills and food costs if complications develop. Most importantly, it's a very small price to pay for the health of your pet and the prevention of the births of more unwanted pets.

MYTH: I'll find good homes for all the puppies.

FACT: You may find homes for all of your pet's litter. But each home you find means one less home for the dogs and cats in shelters who need good homes. Also, in less than one year's time, each of your pet's offspring may have his or her own litter, adding even more animals to the population. The problem of pet overpopulation is created and perpetuated one litter at a time.

Spaying or Neutering is Good for Your Pet

- Spaying and neutering helps pets live longer, healthier lives.
- Spaying eliminates the possibility of uterine or ovarian cancer and greatly reduces the incidence of breast cancer.
- Neutering eliminates testicular cancer and decreases the incidence of prostate disease.

Spaying or Neutering Is Good for You

- Spaying and neutering makes pets better, more affectionate companions.
- Unsterilized animals often exhibit more behavior problems than do those who have been spayed or neutered.
- Spaying/neutering can make pets less likely to bite.
- Neutering makes pets less likely to roam the neighborhood, run away or get into fights.

Spaying or Neutering Are Good for the Community

- Communities spend millions of dollars to control unwanted animals.
- Irresponsible breeding contributes to the problem of dog bites and attacks.
- Animal shelters are overburdened with animals.
